UNIVERSITY OF GAZIANTEP FACULTY OF MEDICINE
2015–2016 ACADEMIC YEAR ENGLISH MEDICINE
SEMESTER I COMMITTEE I

BASIC MEDICAL SCIENCES COMMITTEE I
AIM AND LEARNING OBJECTIVES

Aim:

At the end of the six weeks committee, semester I students should be able to state basic biochemical concepts, cell structure and function, basic concepts in biophysics, and basic biostatistical concepts.

Learning Objectives:

At the end of this committee, students should be able to,

1. State the differences between biochemistry and organic chemistry,
2. Define the structure and function of organic compounds,
3. State the acid-base and pH concepts,
4. Define the solutions,
5. Explain the bioenergetic events occurring in the cell,
6. Explain the chemistry of biomolecules and identify the differences,
7. Explain the enzyme concept,
8. Explain water metabolism,
9. Explain the cell, the importance in the organism, evolutionary occurrence, metabolism, organelles, and basic components of the cell and state the communication between cells,
10. Define cell division and differences between meiosis and mitosis,
11. Explain the control and regulation of cell cycle and cell death,
12. Define the basic concepts of biophysics,
13. Explain the biomechanics concept,
14. Explain the hydrodynamic approach,
15. Summarize the use of statistics in medicine,
16. Define the data types and say the appropriate definitive statistic test for the data, and use the proper table and graphics to show the data,
17. Explain the hypothesis tests,
18. State the parametric and nonparametric tests.

UNIVERSITY OF GAZIANTEP FACULTY OF MEDICINE
2015–2016 ACADEMIC YEAR ENGLISH MEDICINE
SEMESTER I COMMITTEE II

BASIC MEDICAL SCIENCES COMMITTEE II
AIM AND LEARNING OBJECTIVES

Aim:

At the end of the six weeks committee, semester I students should be able to define the structure and functions of nucleic acids, explain the gene expression and regulation, genetic material and analysis techniques. Students also should be able to explain bacterial and viral genetics, cell metabolism, bioenergetic and thermodynamic concepts, basic concepts of biostatistics, approach to the statistical analysis and applications, and basic concepts of behavioral sciences.

Learning Objectives:

At the end of this committee, students should be able to,

1. Define the structure and functions of nucleic acids, explain the synthesis of DNA and RNA,
2. Explain the mechanisms processing the code on DNA,
3. Summarize the repair mechanisms of DNA and state the relationship with the diseases,
4. Explain the rearrangements on genetic material,
5. Explain the molecular genetic techniques and usage in medicine,
6. Define the recombinant DNA technologies and usage areas,
7. Summarize the digestion and absorption of carbohydrates,
8. Explain the biochemical pathways in carbohydrate metabolism in detail,
9. Summarize the hormonal control in the cell,
10. Explain the psychologic development and state the psychopathology theories,
11. Summarize the genetic causes of behavioral disorders,
12. Explain the neurochemistry of behaviors,
13. Define the basic concepts of behavioral pharmacology,
14. State the physiologic basics of behavior,
15. Explain the energy and thermodynamic concepts in biological systems,
16. Define the basic concepts of cell biophysics,
17. Define the molecular biophysic methods and explain the usage in medicine,
18. Explain and interpret the test used in biostatistics,

**UNIVERSITY OF GAZIANTEP FACULTY OF MEDICINE
2015–2016 ACADEMIC YEAR ENGLISH MEDICINE
SEMESTER I COMMITTEE III**

**BASIC MEDICAL SCIENCES COMMITTEE III
AIM AND LEARNING OBJECTIVES**

Aim:

At the end of the seven weeks committee, semester I students should be able to define the inheritance patterns and disease relationships, explain the lipid metabolism, state the basic concepts of microbiology, and evaluate the microorganisms, summarize the immun system elements and mechanism of action, explain the basic concepts of histology and embriology, state the approach to the clinical behavioral syndromes, and summarize the basic psychopathological concepts of childhood and adolescence.

Learning Objectives:

At the end of the committee, students should,

1. Explain the Mendelian and multifactorial inheritance and disease relationships,
2. State the medical importance of inheritance patterns, usage of pedigrees, and purpose of cytogenetic techniques,
3. Explain the lipid metabolism,
4. Classify the microorganisms, explain the structure, genetic properties and reproduction of microorganisms,
5. Define the natural defense mechanisms of microorganisms,
6. Say the tissues and organs playing roles in immunity and their functions,
7. Define the sterilization and disinfection,
8. explain Coombs test and blood transfusion,
9. tell how to interview with patient,
10. state the basic concepts of childhood and adolescence psychopathology,
11. tell the principles of medical interviewing,
12. define both himself/herself and his/her environment using basic and social psychological concepts,
13. Define the parts of a microscope and use it,
14. Define the microscopic properties of cells and tissues, state the tissue preparation and histochemical methods,
15. Explain the basic concepts of histology and embriology, Evaluate the connective and lipid tissues and epithelia in histological way.

SEMESTER I COMMITTEE IV

BASIC MEDICAL SCIENCES COMMITTEE IV
AIM AND LEARNING OBJECTIVES

Aim:

At the end of the eight weeks committee, semester I students should be able to explain protein degradation, nucleic acid metabolism. They should also distinguish the cells of muscle, nervous and cartilage tissues. Explain epigenetics and immunogenetics concepts and role of genetics in cancer cell.

Learning Objectives:

Students should,

1. Define protein degradation,
2. State the amino acid metabolism and functions,
3. State the structure and metabolism of nucleic acids,
4. Define the anatomic terms,
5. Explain the upper extremity bones joints and muscles and distinguish the structures,
6. explain the Columna vertebralis, costae and stemum structures and muscles and joints of them,
7. Explain the breast tissue and its anatomy,
8. Interpret the genom analysis,
9. Define the epigenetic concepts and explain their effects,
10. Explain the molecular basics of cancer development,
11. State the basic concept of immunology and immunogenetics,
12. Define the hystology of nervous, cartilage and muscle tissue.

SEMESTER I COMMITTEE V

BASIC MEDICAL SCIENCES COMMITTEE V
AIM AND LEARNING OBJECTIVES

Aim:

At the end of the seven weeks committee, semester I students should be able to explain the subjects, approaches and applications of anatomy, biochemistry, histology-embriology and physiology.

Learning Objectives:

Students should,

1. Explain the anatomy of lower extremity,
2. Explain the cranial bones, joints and muscles,
3. State the muscles of the back,
4. Discuss the sectional anatomy,
5. Explain the vitamins and their functions,
6. Define membrane structure and transport systems,
7. Summarize the trace elements,
8. Explain the extracellular matriks,
9. Summarize the muscle biochemistry,
10. State the physiological effects and metabolism of neurotransmitters,
11. Summarize the basics of human embriology,
12. Explain the developmental processes of sperm and ovum,
13. Define the fertilization, implantation and gastrulation,
14. State the fetal ve embrional periods and the disorders occurred in these periods,
15. Explain the basic concepts of physiology and homeostasis,
16. Define the body fluids and ion distribution,
17. Explain the cell physiology,
18. Explain te action potential and interpret the functions of synapses and receptors,
19. State the muscle types and contraction physiology,
20. Explain the malpractice of the physician and high quality health service,
21. Interpret the social responsibility of the physician and respect to life.

**UNIVERSITY OF GAZIANTEP FACULTY OF MEDICINE
2015–2016 ACADEMIC YEAR ENGLISH MEDICINE
SEMESTER II COMMITTEE I**

**CIRCULATORY AND HEMAPOIETIC SYSTEM COMMITTEE
AIM AND LEARNING OBJECTIVES**

Aim: The first committee offers courses governing the fundamental aspects of the natural structures of hemopoietic and circulatory systems. The students are also expected to learn etiopathogenesis, symptoms, main clinical and laboratory findings and diagnostic procedures of the hemopoietic and circulatory systems' disorders. Moreover, the curriculum aims at equipping students with knowledge about main structure and functioning of the immune system, general characteristics of viruses, the diseases caused by viruses and diagnostic or therapeutic approaches related to viral diseases.

Learning Objectives: At the end of this committee, second year medical students are expected to be able to;

1. Explain the structures and functions of hemopoietic organs.
2. Describe the functions of the basic structures of the blood.
3. Characterise the anatomic structures of the circulatory system.
4. Describe the embryonic origin and development of the circulatory system.
5. Define the histological structures of the circulatory system.
6. Define the working mechanisms and pathophysiology of the circulatory system.
7. list etiopathogenesis, symptoms and basic clinical, laboratory or histopathological findings.
8. Describe the basic structures and mechanisms involved in blood clotting and the systems that control them.
9. Explain the basic physiological and biochemical mechanisms related to acid – base equilibrium.
10. Define the immune system and its cell types.
11. Explain the disease – causing microorganisms and their features.
12. List the symptoms of the diseases that are caused by these agents, basic clinical, histopathological and laboratory findings and methods for diagnosis.

SEMESTER II COMMITTEE II

RESPIRATORY SYSTEM COMMITTEE
AIM AND LEARNING OBJECTIVES

Aim: The second committee offers courses governing the fundamental aspects of the natural structure, development and functions of the respiratory system. The students are also expected to learn etiopathogenesis, symptoms, main clinical and laboratory findings and diagnostic procedures concerning the respiratory system's disorders. Additionally, the curriculum aims at equipping students with knowledge about general characteristics of bacteria, diseases that are caused by bacteria and the determinants, diagnostic and therapeutic approaches related to bacterial diseases.

Learning Objectives: At the end of this committee, second year medical students are expected to be able to;

1. Describe the anatomical considerations related to the respiratory system.
2. Define the embryological development of the respiratory system.
3. Define the histological structures of the respiratory system.
4. Explain the functioning mechanisms of the respiratory system.
5. Clarify the functions of the organs and the structures that play a role in breathing on the basis of the histological and anatomic considerations.
6. Identify the central and peripheral control mechanisms that have an effect upon respiration.
7. Describe the fundamental concepts and terms concerning the structures and functions of the lungs and list the normal range of values.
8. Define the transport processes of oxygen and carbon dioxide in the blood and clarify the process of gas exchange.
9. Explain the functions of the basic structures of the blood.
10. Describe the biochemical processes of oxygen and hemoglobin in the blood.
11. Explain how the respiratory movements are organized according to the requirement.
12. Define the manner in which blood gases are transported in the blood and the normal value ranges of the blood gas concentrations.
13. Describe the respiratory volumes and capacities and assess whether they are in normal range.
14. List the etiopathogenesis, symptoms, cardinal clinical, laboratory and histological findings of the respiratory disorders.
15. Explain the disease – causing microorganisms and their features.
16. List the symptoms of the diseases that are caused by these agents, basic clinical, histopathological and laboratory findings and methods for diagnosis.

2015–2016 ACADEMIC YEAR ENGLISH MEDICINE
SEMESTER II COMMITTEE III

DIGESTIVE AND METABOLISM SYSTEM COMMITTEE
AIM AND LEARNING OBJECTIVES

Aim: The aim of this committee is to learn the importance of anatomy, physiology, biochemistry and histology of the digestive system, to take a comprehensive approach to the metabolism and to comprehend its importance. The teaching of importance and measurement of blood glucose level and basal metabolism is essential. Thermoregulation mechanism and the clinical relevance will be taught. Information about the causes in viral infections, the general features of virus and the diseases caused by them, the diagnosis and treatment of the diseases will be covered.

Learning Objectives: At the end of this committee, second year medical students are expected to be able to;

- 1- identify the anatomical structures of gastrointestinal tract.
- 2- define the embryological development of gastrointestinal tract.
- 3- define the histological structures of gastrointestinal tract.
- 4- discuss the digestion and absorption of carbohydrates, proteins, lipids, and nucleotides. Students can explain the process of synthesis and degradation of these structures, and define the place of derivatives in the metabolism.
- 5- explain the metabolic importance of trace elements, vitamins, amino acid metabolism, aerobic and anaerobic glycolysis, glycogenesis, glycogenolysis, gluconeogenesis, lipolysis and lipogenesis in hunger and satiety, and students can discuss the metabolic relationship between organs and tissues.
- 6- define the working mechanisms of gastrointestinal tract.
- 7- define the etiopathogenesis, symptoms, clinical and laboratory findings of the diseases of gastrointestinal system.
- 8- explain the pathogenic microorganisms and their features.
- 9- define the symptoms of infection diseases caused by these factors, and the findings of clinical, laboratory and histopathological tests.

SEMESTER II COMMITTEE IV

NERVOUS SYSTEM COMMITTEE
AIM AND LEARNING OBJECTIVES

Aim: It is aimed to learn the anatomy, physiology, histology and biochemistry of central nervous system, and also to relate the anatomy to physiology of the system, give information about the general characteristic of microorganisms and the diseases caused by them, diagnosis and treatment of the diseases.

Learning objective: At the end of this committee, second year medical students are expected to be able to;

- 1- identify anatomical structures of nervous system and sensory organs
- 2- identify the embryologic developments of nervous system and sensory organs.
- 3- identify the histologic structures of nervous system and sensory organs
- 4- identify the working mechanisms of nervous system and sensory organs.
- 5- identify the etiopathogenesis of the diseases of sensory organs, the symptoms, and the findings of clinic, laboratory and histopathologic tests.
- 6- explain the features of the causative microorganisms.
- 7- define the symptoms of infection disease caused by these agents, the basic findings of clinic, laboratory and histopathologic tests, and the diagnosis methods.

**UNIVERSITY OF GAZIANTEP FACULTY OF MEDICINE
2015–2016 ACADEMIC YEAR ENGLISH MEDICINE
SEMESTER II COMMITTEE V**

**ENDOCRINE AND UROGENITAL SYSTEMS COMMITTEE
AIM AND LEARNING OBJECTIVES**

Aim: To find out anatomy, physiology, histology and biochemistry of the endocrine and reproductive systems.

Learning Objectives: At the end of this committee, second year medical students are expected to be able to;

1. Identify anatomical structures of the endocrine system and the reproductive system.
2. Define embryonic development of the endocrine and urogenital systems.
- 3- Define the histological structure of the endocrine system and urogenital system organs.
- 4- Define the mechanisms of endocrine system and urogenital systems' function.
- 5- Recognize the etiology and pathophysiology of diseases related to the urogenital system and pathological changes causing diseases.
- 6- Know the pathogenesis of diseases of the endocrine system, clinical and laboratory symptoms and basic histopathological findings.
- 7-Explain characteristics of disease agent like as protozoa, helminths and arthropods.
8. Explain symptoms of diseases caused by these agents, clinical, laboratory and histopathological main findings and used methods for diagnosis.

2015–2016 ACADEMIC YEAR ENGLISH MEDICINE
SEMESTER II COMMITTEE VI**

**CELL AND TISSUE COMMITTEE
AIM AND LEARNING OBJECTIVES**

Aim: Second year medical students who has learned normal human organism so far, before they start to learn the diseases on the basis of systems, are expected to be acquainted with the disease concept, the distinction between the concepts of disease and health, hurtful internal and external factors which disturb the balance in healthy organism (the damaging), pathological and immunological mechanisms that causes diseases, general characteristics of laboratory and clinical diagnostic methods, the basic principles of defense, prevention and treatment which is necessary to protect the health and understand the pharmacokinetics of drugs; fungi, general characteristics, the diseases caused by them, diagnosis and treatment modality of these diseases.

Learning outcomes: At the end of this committee, second year medical students are expected to be able to;

- 1- Identify and explain types of cell injury.
2. List and describe the changes due to adaptation
3. Explain the mechanisms of cellular aging.
- 4- Explain the etiology and action of mechanisms.
- 5- Describe the pathogenesis and processes in inflammation.
6. Describe the types of inflammation and its morphology.
- 7- List the conditions and types of the recovery, related factors .
- 8- Comprehend concepts of pharmacology and other notions in the medical sciences.
9. Identify pharmacokinetic process and the stages of this process.
10. Define the main mechanisms of drug action.

SEMESTER III COMMITTEE I**

**INFECTIOUS DISEASES AND HEMATOPOIETIC SYSTEM COMMITTEE
AIM AND LEARNING OBJECTIVES**

Aim: Inflammation, basic pathological concepts such as oncogenesis and infectious agents, bacteria, viruses and fungal diseases related to factors such as the formation mechanism, pharmacology for infectious agents are intended to learn by the students in this establishment.

At the end of this committee students will be able to,

- Have knowledge about bacteria, viruses and fungi, understand the mechanisms of pathogenesis,
- Choose evidence-based and high efficient methods in diagnosis of infectious agents,
- Apply basic laboratory tests for the identification of infectious agents,
- Explain antimicrobial drugs and their action mechanisms,
- Describe the changes on tissues and organ systems of infectious agents and genetic diseases.

SEMESTER III COMMITTEE II

DISEASES OF RESPIRATORY AND CARDIOVASCULAR SYSTEM COMMITTEE
AIM AND LEARNING OBJECTIVES

Aim: The aim of Circulatory and Respiratory Systems course committee aim is to obtain information about pathology of respiratory and circulatory diseases, pathophysiology, clinical findings, basic diagnostic methods and pharmacological treatment in common in children and adults and to teach basic concepts related to diseases of these systems prior clinical internships.

At the end of this committee students will be able to,

- Summarize the anatomy and physiology of the respiratory system
- Understand complaints and physical signs related to circulatory and respiratory diseases
- Explain the pathophysiology and the characteristics of normal and pathological heart sounds in adults and children
- Describe invasive and non-invasive radiological, nuclear medicine diagnostic procedures
- Count pathology and the clinical findings of inflammatory diseases of the upper and lower respiratory tract
- Express the basic risk factors causing respiratory and circulatory system diseases and treatment of them
- Describe how to perform the tracheostomy
- Describe epidemiology, pathophysiology, diagnosis, the clinical course and treatment of acute bronchitis, pneumonia and lower respiratory tract infections
- Count the harm and cessation methods of tobacco products
- Count environmental and occupational lung disease and explain the pathophysiology, diagnosis of interstitial lung disease,
- Explain pathophysiology, diagnosis, clinical course and treatment options of heart failure,
- Have information about the electrocardiogram evaluation
- Describe hypertension epidemiology, diagnosis, complications, treatment options and ways of protection
- Count diagnosis, clinical course, morphological characteristics, treatment, epidemiological characteristics, risk factors and prevention of ischemic heart disease
- Describe pathology, diagnosis, treatment and prophylaxis of the infective endocarditis
- Explain acute rheumatic fever pathology, diagnosis, treatment and prophylaxis
- Count congenital heart disease
- Describe the structures cardiopulmonary resuscitation and practice on the model
- Count heart sounds listening centers and able to describe the characteristics of pathological heart sounds
- Explain mechanism of action, pharmacokinetics, toxic effects, clinical use and drug interactions of the drugs affecting autonomic nervous system

- Explain mechanism of action, pharmacokinetics, toxic effects, the clinical use and drug interactions of drugs used for cardiovascular and respiratory systems.

2015–2016 ACADEMIC YEAR ENGLISH MEDICINE
SEMESTER III COMMITTEE III**

**DIGESTIVE SYSTEM DISEASES COMMITTEE
AIM AND LEARNING OBJECTIVES**

Aim: The aim of course committee' is to teach common digestive and hematopoietic diseases in children and adults. Students should explain pathophysiology, etiology, clinical signs and symptoms of these diseases. Students could define laboratory methods, radiology and nuclear medicine used in the diagnosis of these diseases and basic drugs used in the treatment.

At the end of this committee students will be able to,

- Count the diseases of these two systems,
- Create the basic theoretical knowledge in practice by using this information for the years ahead;
- Reach right diagnosis by combining theoretical training with bedside training.

SEMESTER III COMMITTEE IV**

**ENDOCRINE, REPRODUCTIVE AND URINARY TRACT DISEASES COMMITTEE
AIM AND LEARNING OBJECTIVES**

Aim: The aim of this committee is to give information about the physiology and pathology of endocrine organs, reproductive system and urinary system pathophysiology and management of diseases involving endocrine organs, reproductive system and urinary system.

At the end of this committee students will be able to describe:

- Physiology of the endocrine organs and endocrinologic terms
- Pharmacology of the endocrine system
- Pathology of endocrine organs, reproductive system and urinary system
- Pathophysiology of the diseases involving endocrine organs, reproductive system and urinary system
- Management of diseases involving endocrine organs, reproductive system and urinary system
